## PROFESSIONAL SUMMARY

---

Engineering Manager with 10+ years of software engineering experience, including 3+ years leading engineering teams in fast-paced, high-ownership environments. Brings full-stack depth — Python/Java backend and React/TypeScript frontend — with distributed systems at scale, NoSQL databases (MongoDB, Redis), GCP, and CI/CD. Led the development of an entire product from the ground up at Nice Health Care, including React-based UI components, and drove the backend distributed systems re-architecture at MoEngage to 1B+ events/day. Genuine AI-first engineering practice using Claude Code, GitHub Copilot, and structured prompt engineering. Pursuing M.Tech in AI/ML at BITS Pilani with coursework spanning Computer Vision, Deep RL, and Generative AI.

## CORE COMPETENCIES

---

**Technical:** Python, Java, Kotlin, React, TypeScript, Distributed Systems & Microservices, MySQL, MongoDB, Redis, DynamoDB (NoSQL), GCP, AWS, Docker, Kubernetes, CI/CD, AI-Assisted Engineering (Claude Code, GitHub Copilot, Prompt Engineering, LLMs, RAG)

**Leadership:** Engineering Team Building & Hiring, Full-Stack Product Delivery, Roadmap Planning & Execution, Agile / Scrum, Engineering Excellence (Observability, Performance, Resilience), Cross-functional Stakeholder Management

## PROFESSIONAL EXPERIENCE

---

### Engineering Manager, Nice Health Care 2023 – Jun 2026

- Led end-to-end development of the entire product from scratch — architecting backend systems and leading the build of React/TypeScript UI components; owned the full-stack technical direction.
- Built and led a 5-engineer team — owned hiring, coding standards, and technical mentorship; fostered a high-ownership culture with data-driven decision making.
- Partnered with Product to define and drive the technical roadmap; created execution plans and tracked progress against quarterly OKRs.
- Integrated AI tools (Claude Code, Gemini, prompt engineering) into daily engineering workflows, raising the team's AI bar across development, review, and instrumentation.
- Directed a zero-downtime enterprise migration — owned architecture, ran design and risk reviews, coordinated a cross-continental distributed team to delivery.
- Owned quarterly roadmap and sprint planning, improving deployment efficiency by 20% and reducing time-to-market by 15% through streamlined CI/CD and cross-functional collaboration.

### Senior Software Developer, Amazon 2020 – 2022

- Led zero-downtime enterprise migration of 100M+ seller invoice records to a unified global platform — distributed pipelines, 100% regulatory compliance on live traffic.
- Delivered high-volume invoice generation pipelines across regional marketplaces; owned performance, scalability, and SLA compliance end-to-end. Architected ML data-labeling workflows for production AI models.

### Lead Software Engineer, MoEngage 2018 – 2020

- Re-architected a distributed notification engine (Python, Kafka, MongoDB, Redis) to 1B+ events/day with zero downtime, resolving chronic SLA breaches at scale.
- Owned the SMS microservice architecture end-to-end — 100M SMS/month, campaign latency under 30 minutes; designed 'Segmentation as a Service' to cut infrastructure costs.

### Sr. Software Engineer, GrabOnRent 2016 – 2018

- Designed a scalable inventory management system handling ₹500M+ in assets, improving operational efficiency by 25%.
- Built a multi-vendor marketplace integration, growing monthly revenue by 30%.

### Software Development Engineer, Zoomcar 2015 – 2016

- Implemented an e-gift card solution by decoupling payment flows, increasing gift card sales by 40%.

## EDUCATION

---

- M.Tech, Artificial Intelligence & Machine Learning — BITS Pilani (WILP) — Expected 2027 | Coursework: Computer Vision, Deep RL, GenAI
- B.Tech, Computer Science & Engineering — National Institute of Technology (NIT), Bhopal — 2011 – 2015
